PROFESSIONAL SUMMARY

AI Systems Engineer and Data Intelligence Specialist with hands-on enterprise experience in large-scale BI migration, intelligent process automation, and advanced AI agent orchestration. At 20 years old, has delivered measurable, production-level impact in enterprise environments: workflows that previously consumed up to two full working days were reduced to under ten minutes through purpose-built AI agents, with zero documented errors. Winner of SoftwareOne's internal AI Prompt Challenge (Bogotá Region) for designing a high-performance, multi-role prompt architecture that combined professional, philosophical, and psychological reasoning frameworks to produce exceptional AI outputs. Recognized by leadership as a pioneer in AI adoption within the team — building automated agent workflows before they became a formal company objective, and later serving as the internal reference when the organization mandated their adoption. Brings a strong technical foundation in Python, SQL, Power BI, DAX, and Linux, paired with the ability to communicate complex results directly to clients and operate autonomously on high-responsibility tasks. Actively advancing toward Machine Learning Engineering and production AI system development.

PROFESSIONAL EXPERIENCE

Data Analyst → Backend Developer · SoftwareOne · Bogotá, Colombia · On-site Sep 2025 – Mar 2026

Enterprise BI platform migration, document management modernization, and AI-driven process automation

- **SharePoint 10 TB Migration** — Assumed sole responsibility for the critical phase of a SharePoint document environment migration involving over 10 TB of historical data spanning more than four years. Brought in from a different department when the original team was blocked and the client was dissatisfied, I independently managed the release, transfer, and archiving of files, tracked daily processing volumes, and ensured complete data integrity throughout. The initiative achieved approximately 60% storage reduction by eliminating obsolete content and reorganizing the document architecture for long-term scalability.
- **AI Agent Orchestration** — Designed and deployed three specialized AI agents using Microsoft Copilot Studio and advanced prompt engineering, fundamentally transforming the team's operational efficiency. The first agent parsed complex MicroStrategy SQL objects — including grids and reports exceeding 500 lines of code — to extract and document all tables and measures with precision, eliminating the duplicate mapping errors and costly reprocessing that had previously affected the team. A task that once took between several hours and two full days was reduced to under ten minutes with zero errors. The second agent converted MicroStrategy SQL logic into structured DAX code, incorporating strict validation rules that prevented any step from proceeding if required inputs were missing — a safeguard against human oversight during extended work sessions — and ensuring clean, maintainable, non-duplicated code. This agent was further enhanced by integrating it with a centralized Excel mapping file, enabling the automated construction of DAX measures in minutes.
- **BI Migration & QA** — Contributed to the migration and QA validation of more than 15 analytical reports and dashboards from MicroStrategy to Power BI, rewriting complex legacy logic into optimized DAX models. Over approximately two weeks, performed systematic data integrity verification, documented each QA test case, and communicated required adjustments to the team while simultaneously advancing into full development responsibilities.
- **Client-Facing Communication** — Presented progress statistics and technical deliverables directly to the client of the BI migration project, clarifying technical processes, explaining implementation details, and communicating results with clarity and precision — strengthening client confidence and supporting smooth change adoption.
- **AI Adoption Pioneer** — Became the first team member to implement fully automated AI agent workflows, while colleagues were still using these tools manually. This initiative earned formal recognition from leadership and — one month later — aligned precisely with SoftwareOne's updated

strategic objectives, which required all teams to report on AI agent adoption. Colleagues sought guidance on implementation, and my project lead directly leveraged the agents I built to fulfill the company's new reporting requirements.

- **Continuous Learning** — Participated in extensive enterprise training sessions covering Power BI, Python, Microsoft Fabric, strategic AI usage, and data management, as well as specialized events on building AI models with Gemini — forming the technical foundation directly applied in live project work.

KEY PROJECTS

Enterprise BI Platform Migration · SoftwareOne 2025 – 2026

- Translated complex legacy analytics from MicroStrategy into optimized Power BI / DAX models. Resolved inherited metric inconsistencies and delivered measurable improvements in visualization performance and reporting speed.

Enterprise Document Migration — SharePoint · SoftwareOne 2025 – 2026

- Structured migration of multi-year historical data with zero data loss, ~60% reduction in obsolete storage, and full technical documentation package delivered for client handoff.

eCommerce Platform with Role Management · Academic Project — SENA 2024

- Full-stack backend built with Django and REST architecture. Migrated database from SQLite to PostgreSQL and managed full deployment on Linux.

Machine Learning System — Data Analysis · Personal Project (In Progress) 2026

- Actively building a machine learning model focused on real-world data processing and analysis, applying Pandas, NumPy, and Scikit-learn as part of ongoing evolution toward ML Engineering.

TECHNICAL SKILLS

AI & Automation: Advanced Prompt Engineering, AI Agent Orchestration (Copilot Studio), Generative AI, LLM Workflows, n8n, ChatGPT, Gemini, Claude, Copilot

Languages & Data: Python, SQL, Relational data modeling, Data cleaning & structuring

ML & Data Science: Pandas, Scikit-learn, NumPy, Jupyter Notebook, PyCharm (learning: PyTorch, TensorFlow)

Backend & APIs: FastAPI, Django, REST API design

BI & Visualization: Power BI, DAX, Microsoft Fabric, Enterprise metric analysis

Databases: PostgreSQL, SQLite, Complex query optimization

DevOps & Environment: Linux (3+ years as primary OS — terminal, package management, version control, error diagnosis), Docker, Git, GitHub, Virtual environments

Process & Quality: Technical documentation, QA testing & functional validation, Client communication, Delivery management

CERTIFICATIONS & RECOGNITION

- AI Prompt Challenge — Winner, Bogotá Region · SoftwareOne · 2025: Recognized for designing a high-performance, structured prompt combining multi-role expertise (professional, philosophical, and psychological), precise behavioral rules, and deep contextual framing — producing exceptional AI output quality for a productivity and habit-formation challenge.
- Enterprise Certification in Generative AI — Strategic application of artificial intelligence tools · SoftwareOne · 2025

EDUCATION

Technologist in Software Analysis & Development · SENA · Bogotá, Colombia 2023 – 2025

Equivalent to an Associate's Degree in Software Development (nationally recognized Colombian technical institution). Over 2 years of intensive training in software development, architecture, and systems analysis.

High School Diploma (Bachiller Académico) · Centro de Promoción San José · Bogotá, Colombia 2021 – 2022

Graduated with Honor Medal for outstanding academic performance in mathematics, Spanish, and English.

LANGUAGES

Spanish: Native

English: Professional working proficiency — technical documentation, written communication in Slack/GitHub, asynchronous international team collaboration
