PROFESSIONAL SUMMARY

Software Analysis and Development Technologist with a clear trajectory toward Artificial Intelligence Engineering, built through real enterprise experience and a deep commitment to continuous self-directed learning. With a solid foundation in data engineering consolidated during a professional tenure at SoftwareOne — where responsibilities were carried out fully remotely, demonstrating consistent autonomy, reliability, and delivery without the need for in-person supervision — the ability to examine operational environments with a critical perspective has been developed, identifying inefficiencies and translating them into intelligent, automated solutions that generate measurable value: workflows that previously demanded up to two full working days were transformed into agile, near-error-free processes through AI agents proposed and built collaboratively with the team. Advanced prompt engineering expertise and AI agent orchestration skills led to winning SoftwareOne's internal AI Prompt Challenge (Bogota Region) and actively fostering a culture of intelligent automation within the project team. A robust technical foundation in Python, SQL, and Linux is combined with a deeply collaborative mindset, effective client communication, and the capacity to operate with full autonomy on high-responsibility tasks. The path forward is defined and actively under construction: specialization in Artificial Intelligence Engineering, advancing through self-directed Machine Learning study as the natural and deliberate evolution of everything built to date.

PROFESSIONAL EXPERIENCE

Data Analyst · SoftwareOne · Bogotá, Colombia — Remote Sep 2025 – Mar 2026

Data Engineering Track · BI platform migration, document management modernization, and AI-driven process automation

- **SharePoint 10 TB Document Migration** — Contributed as an active member of a cross-functional team to a large-scale SharePoint document environment migration encompassing over 10 TB of historical data accumulated across more than four years. Assumed direct ownership of the file release and transfer phase — managing the migration, systematic archiving, and daily volume tracking in a fully remote setting — while the broader team handled client communication, institutional archiving, and shared documentation. The collective effort achieved approximately 60% reduction in obsolete storage, with a complete reorganization of the document architecture for long-term scalability and full data integrity preserved throughout every stage.
- **AI Agent Design & Proposal** — Identified concrete automation opportunities within the team's workflows and proposed the design of specialized AI agents using Microsoft Copilot Studio and advanced prompt engineering techniques. The first agent was conceived to precisely parse MicroStrategy SQL objects — including grids and reports exceeding 500 lines of code — exhaustively extracting and documenting all tables and measures involved, eliminating the duplicate mapping errors and costly reprocessing that had frequently affected the team. The second agent transformed MicroStrategy SQL logic into structured, maintainable DAX code, incorporating validation rules that prevented progression in the absence of any required input — an intelligent safeguard against human oversight during extended work sessions — ensuring clean, duplication-free code. This agent was further integrated with a centralized Excel file, enabling the automated construction of DAX measures in a matter of minutes. The concrete results opened a genuine team conversation about the strategic value of intelligent automation within the project.
- **BI Migration MicroStrategy → Power BI & QA** — Contributed actively to the migration and rigorous validation of more than fifteen analytical reports and dashboards from MicroStrategy to Power BI, rewriting complex legacy logic into optimized DAX models. Over approximately two weeks, participated in quality assurance work, meticulously verifying data integrity, documenting each test case, and communicating required adjustments to the team in a timely manner — while simultaneously advancing into full development responsibilities.

- **Technical Client Communication** — Presented progress statistics and technical deliverables directly to the client of the BI migration project, articulating with clarity and precision the details of the process, the results achieved, and the technical decisions adopted. This direct interaction strengthened client confidence in the team and contributed to a smooth, orderly adoption of the implemented changes.
- **Intelligent Automation Initiative** — Proposed the adoption of automated AI agent workflows at a time when most team members were still operating these tools manually. After demonstrating their value through concrete, reproducible results, colleagues sought guidance on implementation, and the initiative generated genuine, sustained interest in expanding intelligent automation practices across the project.
- **Continuous Learning** — Participated in extensive enterprise training sessions covering Power BI, Python, Microsoft Fabric, strategic AI usage, and data management, as well as specialized events on building AI models with Gemini — acquiring technical foundations directly applied in live project work.

KEY PROJECTS

Enterprise BI Platform Migration · SoftwareOne 2025 – 2026

- Translation of legacy MicroStrategy analytical logic into optimized Power BI and DAX models, resolving accumulated metric inconsistencies from the legacy system and delivering measurable improvements in visualization performance and reporting speed.

Enterprise Document Migration — SharePoint · SoftwareOne 2025 – 2026

- Structured, team-led migration of multi-year historical data with zero data loss, ~60% reduction in obsolete storage, and complete technical documentation package delivered for client handoff.

eCommerce Platform with Role Management · Academic Project — SENA 2024

- Full backend developed in Django with REST architecture, database migration from SQLite to PostgreSQL, and complete deployment on Linux.

Machine Learning Model — Data Analysis · Personal Project (In Progress) 2026

- Active construction of a first machine learning model oriented toward real-world data processing and analysis in CSV format, applying Pandas for data manipulation and cleaning, and exploring supervised learning algorithms with Scikit-learn. First practical, self-directed step toward specialization in Machine Learning Engineering.

API & Webhook Automation Exploration · Self-Directed Learning (Ongoing) 2026

- Active experimentation with system integration flows through APIs and webhooks using n8n as the orchestration platform. Simultaneously exploring local execution of AI models leveraging personal hardware (AMD Ryzen 5 5600G, 32 GB RAM, SSD), with the goal of mastering local inference and LLM integration within autonomous workflows.

TECHNICAL SKILLS

AI & Automation: Advanced Prompt Engineering, AI Agent Orchestration (Copilot Studio), Generative AI, LLM Workflows, n8n, APIs & Webhooks, ChatGPT, Gemini, Claude, Copilot

Languages & Data: Python, SQL, Pandas, Relational data modeling, Data cleaning & structuring, CSV processing

ML & Data Science: Scikit-learn, NumPy, Jupyter Notebook, PyCharm (learning: PyTorch, TensorFlow)

Backend & APIs: FastAPI, Django, REST API design, System integration

BI & Visualization: Power BI, DAX, Microsoft Fabric, Enterprise metric analysis

Databases: PostgreSQL, SQLite, Complex query optimization

DevOps & Environment: Linux (3+ years as primary OS — terminal, package management, version control, log-based error diagnosis), Docker, Git, GitHub, Virtual environments, Local AI model inference

Process & Quality: Technical documentation, QA & functional validation, Client communication, Autonomous remote work, Team collaboration & delivery management

CERTIFICATIONS & RECOGNITION

- Winner — AI Prompt Challenge, Bogota Region · SoftwareOne · 2025: Recognized for designing a high-performance structured prompt integrating multi-disciplinary expert roles (professional,

philosophical, and psychological), precise behavioral rules, and deep contextual framing — producing exceptional AI output quality for a complex productivity and habit-development challenge.

- Enterprise Certification in Generative AI — Strategic application of artificial intelligence tools · SoftwareOne · 2025

EDUCATION

Technologist in Software Analysis & Development · SENA · Bogotá, Colombia2023 – 2026

Nationally recognized technical degree in Colombia, equivalent to an Associate's Degree in Software Development. Over two years of intensive training in software development, systems architecture, and data analysis, with active orientation toward artificial intelligence engineering as an ongoing specialization.

High School Diploma (Bachiller Academico) · Centro de Promocion San Jose · Bogota, Colombia2021 – 2022

Graduated with Honor Medal for outstanding academic performance in mathematics, Spanish, and English.

LANGUAGES

Spanish: Native

English: Professional working proficiency — fluent reading of technical documentation, written communication in collaborative environments (Slack, GitHub), effective participation in asynchronous international teams
